Modular Smart Ring
Team: PCG3

MRing is a new type of smart ring. The innovative wearing method enables the modular design and offers a better wearing experience. By separating the communication module, function module, and battery, MRing fully utilizes the limited space around fingers. Users can switch the function module based on their needs to make MRing a touch panel, an alarm, a fitness monitor, an earphone, etc.

Modular design for different Functions

Fit for different Scenario

The easiest way to wear a ring
